

iOS

NetSupport Browser App for iOS

This mobile Browser app (for iOS 9.3 and above) brings together the functionality previously available separately in the NetSupport DNA Browser and NetSupport School Student apps – making app use simpler and more streamlined for users of NetSupport DNA or NetSupport School, or both! It gives teachers the power to connect to each device in a NetSupport School managed classroom**, enabling real-time interaction and support.

Key Features:

- **Student Register:** The teacher can request standard and/or custom information from each student at the start of each class and create a detailed register from the information provided.
- **Lesson Objectives:** Once connected, students are presented with details of the current lesson, together with overall objectives and their expected learning outcomes.
- **Sending Messages:** The teacher can broadcast messages to one, selected, or all devices. Students receive an audible and visual alert when a message is received and they can then be viewed and managed by the student.
- **Requesting Help:** Students can discreetly alert the teacher when they require assistance by sending an alert to the teacher's desktop. A red toolbar appears at the top of the student's device, enabling the teacher to easily identify students in need of help.
- **Question and Answer Mode:** The teacher can conduct instant student and peer assessment. Deliver questions verbally then select students to answer (randomly - pot luck, first to answer, or in teams). Bounce questions to multiple students, peer assess and keep individual and team scores.
- **Chat:** Both the student and the teacher can initiate a Chat session and participate in group discussions.
- **Class Surveys:** Teachers can conduct surveys to gauge student knowledge and understanding. Once students have responded, the teacher can then show the results, enabling students to receive instant feedback on their progress.
- **Show Screen:** Teacher's can show their desktop to connected tablets, at which point students are able to use touch-screen gestures in order to highlight key information.
- **Launch URLs:** Remotely launch a selected website on one or multiple student iPads.
- **Battery Status:** View the current battery strength for each connected student device.
- **Student Rewards:** Remotely assign 'rewards' to students to recognise good work or behaviour.
- **Internet Metering and Restrictions:** Teachers can now apply lists of approved and restricted websites to the student's devices.
- Plus much more.

If NetSupport DNA is also installed, the following features are supported by the Browser app: Hardware Inventory, MDM deployment/configuration, Phrase monitoring, Safeguarding Resources and Report a Concern.
