

Greenville County School District

Jerry Tucker, System Support II

Tell us a little about Greenville County School District...

Greenville County Schools is the largest public school system in South Carolina, with 76,000 students. It has almost 100 elementary, middle and high schools, as well as nine special centers.

What challenges were you trying to solve?

Our teachers needed a way to supervise students more closely. It's difficult to observe a whole class, so we needed to find a better way to monitor them, as well as improve their focus.

Why did you choose NetSupport School?

We chose NetSupport School because we liked how easy it is for our teachers to use. There are lots of features – not just for monitoring, but for also for instruction. It's also good that it's flexible enough for us to use devices on different platforms – and the cost was right for us too.

How is the software being used across the district?

NetSupport School helps our teachers with instruction and student monitoring to ensure they stay on track with work. We now have it as our standard product and it works very well for us.

How and where has NetSupport School added value?

Our teachers have found that as they can keep their students focused on work, their productivity has increased. It also saves teachers a lot of time because they can do things quickly, such as share screens or log computers in or out.

Would you recommend NetSupport School?

Yes, we have done so many times. It's a great product!
