

### Digital Leadership

- Teachers can set up student “group leaders” and assign them certain tutor rights in class, allowing them to lead and demonstrate to their peers.

### Influence and Innovation

- Create approved website lists you can customise, to positively influence behaviour.
- Give individual students visual rewards to encourage effort and good behaviour.
- NetSupport School is constantly evolving. Customer feedback plays an important part in this to ensure it continues to deliver real value to schools.

### Content and Community

- Show a student’s screen to the class to promote positive use - and show the tutor’s screen to all or selected students to demonstrate.
- Monitor and control students’ screens to ensure they are on task and completing work in a positive manner.
- Create learning groups where all selected students can join a chat discussion, enter their comments and share with the rest of the class.
- Create and share tests and surveys in a variety of formats to reinforce learning outcomes.
- Use the gamified Q&A module to gauge students’ understanding of topics and encourage collaboration and peer assessment.
- Capture class content in a journal for post-lesson review. This is handy for revision and particularly beneficial for students absent from a lesson.

### Respect and Responsibility

- Promote positive and responsible behaviour by keeping students informed via the student information bar. This shows which websites and applications are available to use, as well as highlighting whether keyboard monitoring is in use by the teacher.

### Online Safety

- Create a safe learning environment with NetSupport School’s internet metering, website co-browsing, keyboard monitoring and portable device control features.
