

Staten Island Technical High School Joseph Buro, Teacher

How is the software currently being used in your organisation?

In my classroom, I use NetSupport School to monitor my students' work for grading and to observe their progress. I often cast my screen to theirs using the show features, share their screens with their colleagues using exhibit mode, or allow random showcasing on a connected TV. We also use the software to manage things like collecting and distributing work, simultaneously surfing web pages, and more.

What challenges were you trying to solve?

We wanted some software that would enable us to manage desktop computers within our school building and give our teachers more control over student PCs in their computer labs.

How has the software helped you?

NetSupport School enables our students to work much more efficiently than before. In addition, it's great that I can configure my desktops to suit my needs – and other teachers can do the same.

How and where has NetSupport School added value?

Due to it being so easy to use, NetSupport School has noticeably increased productivity and saved time in our school. It has also added value for us in terms of flexibility and performance – especially with the multi-platform support that it offers.

Would you recommend NetSupport School to others?

Yes, I would recommend NetSupport School to others.

“ It's great that I can configure my desktops
to suit my needs. ”
