

NetSupport's Classroom Management Solution Empowers Educators in Mauritius

The Ministry of Education in Mauritius has selected Droopnath Ramphul State College as the pilot site for Microsoft Windows MultiPoint Server 2010 (WMS), with NetSupport School Centralized Computing Edition (NetSupport School CCE).

In today's increasingly digital and connected world, providing students with better access to technology is deemed to be critical. The shared-resource computing WMS is therefore an ideal solution for achieving this objective as it removes cost barriers relating to hardware and software, limited IT budgets and high energy prices. Educators are now also equipped with the tools they need to better prepare their students for success.

In line with Microsoft's vision to offer best-of-breed and affordable technology, NetSupport is helping to ensure that the benefits of the WMS are fully realised by providing a fully compatible version of their market-leading Classroom Management solution, NetSupport School CCE.

Microsoft staff were on hand at the college to help in the installation of the WMS and in developing an understanding of the capabilities of NetSupport School CCE. The 23 teachers who were trained were very enthusiastic about the ease with which the software enabled them to engage and interact with the students either individually or in a group.

In addition to the ICT laboratory, WMS has also been installed in the college's library and NetSupport School CCE will prove to be a valuable monitoring tool, particularly in these environments, to ensure students are effectively using their personal learning time for appropriate research, and not as an extension of their social lives!

After the installation of WMS, Mrs Beeharry Panray, Rector of the College made the following statement:

"Windows MultiPoint Server 2010 coupled with NetSupport Classroom Management is set to transform the use of Information and Communication Technology at Droopnath Ramphul College. The government has a vision to make computing accessible to all students across the country and based on our positive experience i'm glad that my school is among the first to benefit from such valuable technology."
