

Classroom instruction, monitoring and management

Teachers can see all student activity, **test and assess** understanding.

Access a host of monitoring, communication and collaboration tools from your tablet with the **iOS Browser app**.

Technicians can **answer assistance requests** sent silently by the teacher.

Teaching Assistants can use the dedicated **iOS or Android app** to see all or selected student screens and work collaboratively with the teacher.

Gauge wellbeing and topic confidence with **student feedback mode**.

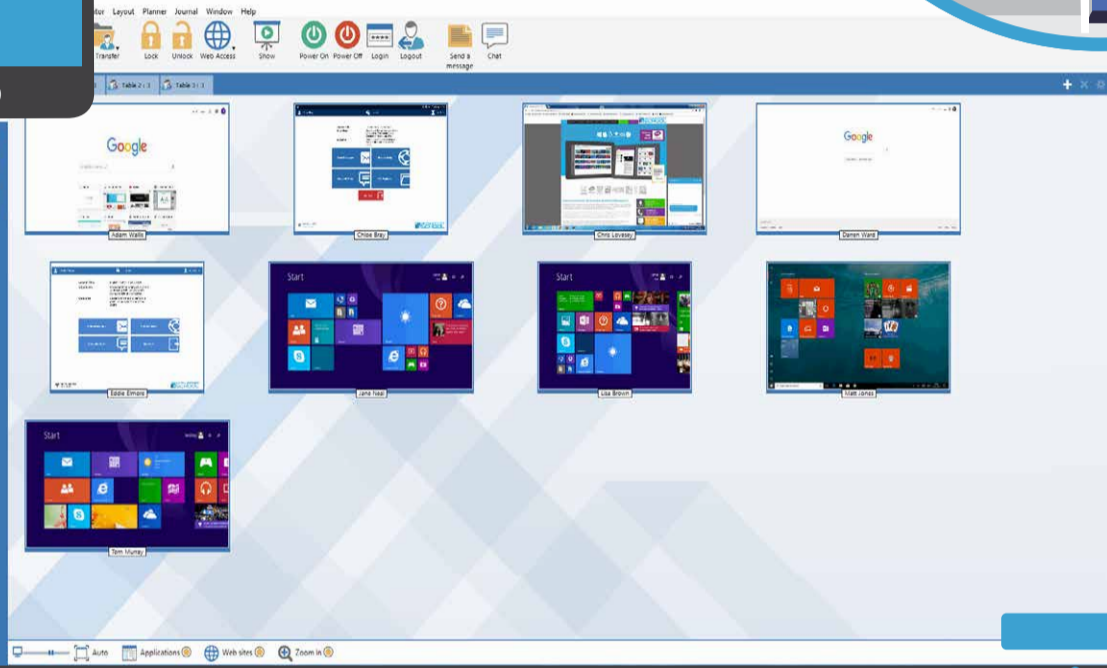

Create and deliver **digital journals** unique to each student from live lesson content.

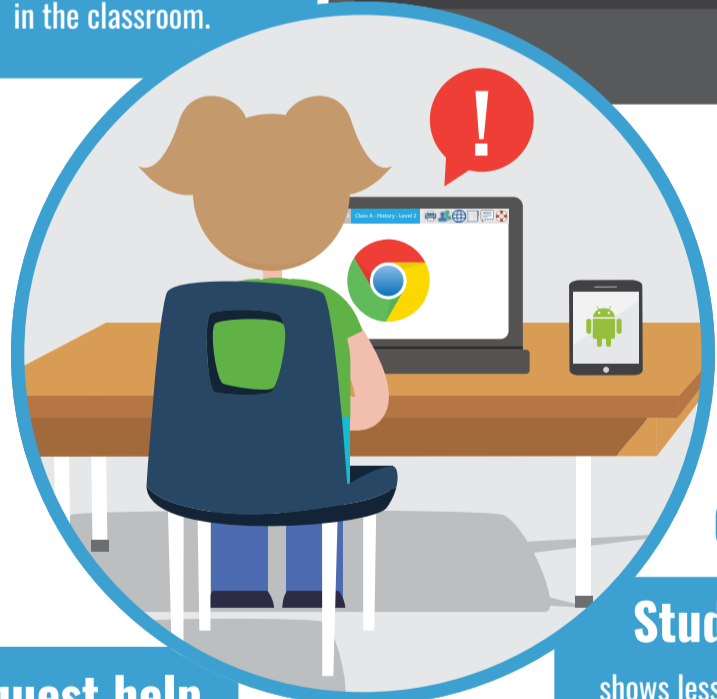

Discover and **manage computers** across the school; **gather inventory**; see real-time system views, provide **instant remote support** to students and more, for effective IT Management

NetSupport School for macOS allows teachers to connect from a Mac device.

Students can use a **mix of technology** in the classroom.

Request help silently from a teacher when needed.

Student toolbar shows lesson objectives, expected outcomes, restrictions in force, what websites/apps they can use...

Integration with **Google Classroom**

'Easy' user mode to support technology-shy teachers.

Send and collect files to and from students, listen to them in a **language lab**, collaborate on an **inbuilt whiteboard** and so much more!

Control access to the internet, applications, printers; limit memory stick use – all with a single click.

SIS **Student Information System** integration via ClassLink OneRoster.

NetSupport School is built on best practice. Best of all, it encompasses **all platforms** so, no matter what technology the school uses, we have it covered.
