Tutor Assistant App for iOS and Android

NetSupport School Tutor Assistant is designed to provide an extension to the traditional desktop Tutor application. Once installed onto a tablet or smartphone, the app pairs with the desktop Tutor software and delivers the freedom for a teacher to move around the classroom while still being able to monitor and interact with the class, individually and as a whole.

The app allows a teaching assistant to blank screens, lock student mice and keyboards, monitor activity on all student computers, control internet, application and printer usage as well as identify when a student needs help.

iPhone, iPod Touch and Android phones

As well as providing the Tutor Assistant app for iPad and Android Tablets, a version is also available for the iPhone, iPod Touch, Android smartphones and Kindle Fire. Working much like a simple TV remote, this variant allows existing devices to be used where tablets are not available and offers one-click access to lock screens, control printing, internet and application usage. All of the mobile and tablet variants are provided without additional cost.

Features supported on tablets:

- Support for Android/iOS tablets and Kindle Fire
