

# Supporting staff wellbeing in your school

Wellbeing isn't just an issue for students but for teachers and technicians too.

High workload, lack of work-life balance, feeling under-resourced and unsupported by leaders can all combine to negatively impact staff wellbeing. With so much technology now in schools, it's time to think about how it can help wellbeing, as well as teaching and learning.

Introducing NetSupport's education solutions:

**NetSupport School:** The market-leading classroom management and instruction solution (on-premise).

**NetSupport DNA:** Award-winning school IT asset management with safeguarding.

**classroom.cloud:** Affordable classroom instruction, online safety and IT management (cloud-based).

These solutions all offer tools delivering shortcuts to save teachers' time, alleviate anxieties around technology use and make technicians' lives easier.

## Easy-to-use technology

Many teachers are confident using technology in the classroom. For others, the thought of it causes anxiety and stress. **NetSupport School** offers three graded 'user modes' (Easy, Intermediate and Advanced) to make edtech more accessible and help them to gain confidence as they go.

*"75% of education staff described themselves as stressed."*

## Time-saving tools

Even in the classroom, every little shortcut can help. **classroom.cloud** syncs with Microsoft SDS, Teams, Google Classroom, Clever (US only) and Class Link – and even has its own Class Code tool to connect students and teachers instantly. And with a single click, **NetSupport School** and **classroom.cloud** can push a specific website to every student's computer rather than waste vital moments waiting for them all to get to the right place. Multiple shortcuts like these can combine to help free up everyone's time.

## Reduce workload

Creating reusable resources can be a huge time-saver. **NetSupport School** offers an intuitive Test Designer to create customised tests that include text, picture, audio and video questions. It marks the results automatically, providing in-the-moment feedback for students. Tests can be saved and edited as needed, instead of creating new ones from scratch each time.

## Best practice

Helping any absent students catch up is easy, as is supplying revision notes for the class. The **NetSupport School** Student Journal tool allows teachers to note all relevant information from the lesson in a document and include notes, links, screenshots, homework details, chat conversation transcripts – and more. Now everyone has a record of the lesson and teachers can easily refer to the content of previous lessons without having to search through files and notes.

***“78% of all staff experienced mental health symptoms due to their work”***

## Be in the know about online safety

**classroom.cloud** and **NetSupport DNA's** online safety tools are an extra pair of eyes and ears for staff. They provide insights into what students are typing, copying or searching for and alert staff if a student is at risk – reducing the worry about potentially missing a safeguarding issue. Schools can even mark and group vulnerable students on the system for extra oversight – and students can report their concerns to trusted staff in confidence.

## Support for Tech Support!

**NetSupport DNA** can help technicians promote wellbeing across the school by keeping the network and all devices well maintained and supported via its comprehensive set of remote management tools – all from a central point. And **classroom.cloud** is not only easy to set up and maintain, but practically takes care of itself afterwards too – a big plus for technicians!

***“40% of people would feel uncomfortable having a conversation with someone about their mental health”***

## Reduce manual tasks

For the IT team, manual tasks can be reduced, thanks to the data that NetSupport DNA collects from each device: from CPU and BIOS types to network, video, storage information, hardware and software inventories and more – making time available to focus on other tasks.

## Tech takes the strain

Spotting areas where costs or time can be saved is important and awareness is half the battle. Using **NetSupport DNA** and **classroom.cloud's** Power Management tools, schools can create schedules to manage usage and save money in and out of school time. **NetSupport DNA's** Efficiency view shows technicians whether technology is being used effectively and allows them to reduce any wastage – while **classroom.cloud's** Audit Log provides an overview of devices, users, licences, power management, and more for an informative overview!
